

NG6

NEXT GENERATION

Innovative, patent pending geometry, developed and engineered by ATA, to accelerate the manufacturing process and increase the tool life.

100% more stock removal

The NG6 will show huge reductions in time and effort with its powerful flute geometry, with stock removal up to double that of the double cut bur, with the addition of the unique Accelerator coating. Designed to work faster without negatively affecting the vibration for the user

Reduction in manufacturing costs

High performance cutting and finishing capabilities provides a cost reduction solution for heavy stock removal applications

Patent pending

The unique Next Generation 6 carbide bur is currently under patent pending status and is ISO certified, guaranteeing you superior ATA quality

NG6

NEXT GENERATION

NG6 - introducing an innovative, patent pending geometry, with a unique combination of profiled fluting with a low cross cut and a primary relief, that when combined with the very latest in coating technology, delivers:

- Significantly higher levels of metal removal
- Reduced operator grinding time
- Greatly improved cutting performance
- Reduction in component machine time
- Reduction in component manufacturing costs

Resulting in the reduction of overall manufacturing costs

ACCELERATOR

NG6 removes over 75% more stock on Mild Steel than Double Cut burs during the first 5 minutes of grinding!

With the unique *Accelerator* coating the rate of stock removal is **DOUBLE** that of a double cut bur.

The NG6 along with the coated *Accelerator* option, outperforms all comparable carbide burs on Steel, Stainless Steel, Mild Steel and Cast Iron.

Available Bur Shapes

A Shape
